# Browsing DI Portal with Firefox

When you visit the DI Portal with Firefox browser, you may have difficulties to display some elements (i.e. action buttons, forms). In this case, you have to install an add-on to force Firefox to enter in Internet Explorer Compatibility Mode.
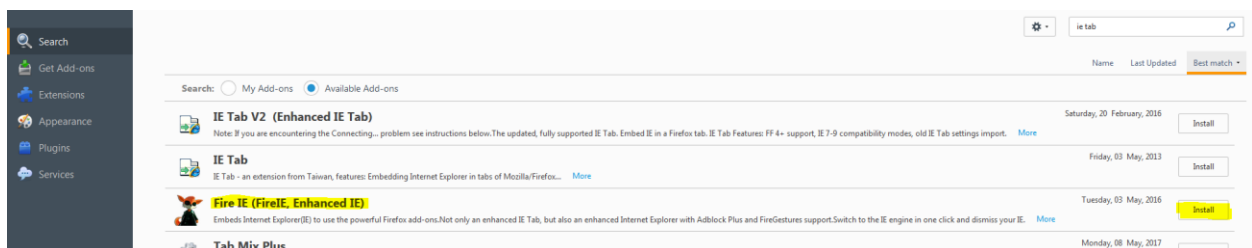

Open "Menu"

TIPS: You can also type this URL in the address field: **about:addons**

In the Search field, type "ie tab"

In the results list, click "Install" for the **Fire IE** add-on

After some seconds, the add-on will be installed. Then, you have to restart Firefox.

Now, the add-on is visible in your "Extensions" list.

Go on the DI Portal http://diweb.hq.nato.int, right-click on "Home" and select "**Open Link in New Tab with IE Engine**"

You are in Internet Explorer Compatibility Mode. You can check that the icon "Compatible" is visible.
